Overview:

PassRate is a simple mobile app designed to allow pilots to anonymously submit their results for airline assessments. The app provides a streamlined interface where users select their airline, assessment year, and mark whether they passed (with a job offer) or failed the assessment. Submissions are stored in a backend (preferably Firebase) and the app generates statistics such as total responses, pass rates, and rankings of airlines based on success rates and the number of assessments reported. Users can also view public statistics filtered by airline and year. With no user authentication required, the app focuses solely on submitting and viewing aggregated data. The clean, modern design ensures ease of use on both iOS and Android platforms. The app provides a simple but valuable way for pilots to track assessment results and for the public to access insightful airline data.

Background:

The PassRate app was conceived to provide pilots with a straightforward way to anonymously track their success or failure in airline assessments. The aviation industry is highly competitive, and assessment results can vary widely across airlines and years. However, there's currently no simple platform to gather and share this type of information. PassRate addresses this gap by allowing pilots to submit their results easily and anonymously, providing valuable insights into the assessment success rates of various airlines. With the app, users can view aggregated statistics that show pass rates and track which airlines offer the highest success rates for pilot assessments. The app's clean design, lack of login requirements, and focus on data submission and statistics make it an efficient tool for pilots and the general public to access relevant data quickly and easily.

Functional Requirements:

1. User (General Public)

- Submit Assessment:
- Select airline from a dropdown
- Select year from a dropdown
- Choose "Passed + Job Offer" or "Failed" and submit the assessment
- View Statistics:
- Select airline and year to view:
- Total number of responses
- Success rate (percentage of pass responses)
- Top 5 airlines with the highest pass rate
- Airlines with most assessments reported for the selected year

2. Admin (Backend)

- View All Submissions:
- Access and view all user submissions (airline, year, pass/fail status)
- Manage Data:
- Admin can monitor the database to ensure accuracy and clean data
- Generate Reports:
- Generate reports based on airline and year, including success rates and top lists
- Manage Statistics:
- Update and maintain statistical data that is shown on the public statistics screen

Technology Stack:

- Design UI/UX for mobile application and admin panel using Figma
- Android and iOS Mobile app frontend development using Flutter
- Admin panel dashboard frontend development using React JS
- Backend development using Node JS, Express JS
- The database will be MongoDB
- Preferred hosting: DigitalOcean/AWS

Cost Breakdown:

Phases	Description	Technology	Timeline	Price (\$)
1st Stage	Create UI/UX mockups and prototypes for the app and admin panel	Using Figma	20 days	\$1,000
2nd Stage	Develop a mobile application interface	Flutter for Mobile Apps	20 days	\$1,000
	Build the admin dashboard frontend	React JS or Next JS for Admin Dashboard		
3rd Stage	Develop backend services and APIs for the app and admin panel	Node.js Express.js MongoDB as a Database	30 days	\$1,000
	Implement API integrations with the frontend	Dio https GetX	10 days	
	Set up CI/CD pipelines and infrastructure automation	CI/CD, Infrastructure		
4th Stage	Conduct comprehensive QA testing		As per policy	\$2,00
	Deploy app to App Store and Google Play, handle server setup			

| **Total Cost** | | **\$3,200 USD** |

| **Total Timeline** | | **80 days** |

Development Stages:

Stage	Description
Information Gathering	We will gain a thorough understanding of all the app features by having a formal meeting with you via call or text communication.
UI/UX Design	Design of all the Application Screens in accordance with the finalized Color scheme and functionality.
IOS Prototyping	Front End Presentation of the finalized design on an IOS Device.
Android Prototyping	Front presentation of the finalized design on an Android Device.
Database Design	Making Database Structure: all the tables, hierarchy, and defining all the roles.
API Development	Making Services for communication between apps and the admin panel.
Fetching Data response from the Admin Panel to the Application	Service calling from the admin panel and sending the response in JSON to the application backend.
Integration of the Backend with the iOS Application	Implementation of services and making the Backend and iOS applications integrated.
Integration of the Backend with the Android Application	Implementation of services and making the Backend and Android application integration.

Project Deliverables:

- Android and iOS mobile app
- Webview admin panel dashboard
- User-friendly UI design and prototype
- Source code
- All necessary login credentials related to the project

Ownership:

- At the end of the project, the source code will be sent to the client, and the client will have ownership and rights of the source code of the application.

Testing and Quality Assurance:

With our experience in the software development field, UI Verse can provide an extremely valuable third-party perspective when brought in to test/QA another vendor's software. System testing is fundamental to the quality of any software. We at UI Verse always encourage our clients to include a distinct testing phase in any software project. This testing phase allows the system to be tested as a completed unit and is usually done by someone other than the developer. In this manner, additional user feedback on the functionality and usability of the software can be integrated prior to initial release. Completion of the testing phase is accomplished through preliminary use by actual end users of the software in the real-world conditions of the client's site.

Support & Maintenance:

We believe in providing a one-stop solution to our clients. After the development is completed, we will let you test the platform thoroughly. After we get the final version of the website, we will upload the system to your server and link the website with the domain.

We will be providing you with free post-project support for bug fixing for 2 months after the system is live.

Support includes;

- **Security Updates:** Security is the foremost priority of all the online systems in today's World. Our technical team will make sure that all your security certificates are up to date, and if any update is needed in the system, we will make them right away to ensure no malicious activity is harming the system.
- **Bug Fixing:** The platform we will be creating will be a combination of lots of code. If any part of the code malfunctions, the system can crash or any part of it can malfunction. If any bug is reported by any user, our team will provide you with support and assistance on bug fixing in accordance with the package you choose from the packages mentioned below.

Packages:

	Details	Price
Free Support	1st 100 days after the final delivery	FREE
Standard Support	We will be providing you with immediate support for bug fixing on email. The response time of our representative would be within 24 hours.	\$300.00/Month for Bug Fixing

Hosting And Domain:

Server:

For storing the admin panel, website, and data of the apps, we need to have a server where everything will be hosted. As the user base will not be very high at the start, we recommend using DigitalOcean Server at the start, and we can move to Amazon Web Server (AWS) later on when your user base grows.

The server will be registered in your/company's name, and you'll be bearing the payment, and we can buy it and set it up for you.

The following are the cost details of the servers we can use:

- DigitalOcean (dedicated): <https://www.digitalocean.com/pricing/>
Note: Will use the introductory compute droplet (\$5/month) to start, then scale as website traffic increases
- AWS (dedicated): <https://aws.amazon.com/ec2/pricing/>
Note: Will use the Free tier for development and starting, and then scale up as website traffic increases
- Bluehost (shared): <https://www.bluehost.com/hosting/shared#pricing-cards>
- GoDaddy (shared): <https://pk.godaddy.com/hosting/web-hosting>

Domain:

To host the website, we will need to have a domain name. If you already have a domain name, we can use that; otherwise, we can guide you to buy a domain.

Future Release:

Information Technology (IT) is a rapidly growing and changing field. The app layout trends, Payment options, APIs, etc. Our development team is always there to provide you with updated and the most optimized apps and websites for your business. We can provide you with app feature updates in the future by adding a module, some new payment methods, or any type of addition you want.

The price of that feature can be discussed when we discuss the feature details. We look forward to working with you in the long term and providing you with a platform that would be the best fit to compete in the industry.

Conclusion:

Thank you for trusting me with your project. I am genuinely excited about the opportunity to work with you and bring your ideas to life. My team and I are fully dedicated to delivering exceptional results that align perfectly with your vision. We will ensure the project is completed on time, meets the highest standards, and exceeds your expectations.

Your satisfaction is our top priority, and I am here to support you throughout the entire process. If you have any questions, need clarification, or wish to discuss additional features or changes, please don't hesitate to reach out at any time. Open communication is key, and I'm committed to making this journey smooth and hassle-free for you.

I truly believe that this collaboration will lead to a successful outcome. Together, we can create something truly remarkable and impactful. I look forward to building a strong partnership and helping you achieve your goals.

Let's create something amazing together!

Best regards,
Mahmud
